

Exploration Education Physical Science Course

Co-op Syllabus (based on meeting 28 weeks, 1.5 – 2 hours/week)

GENERAL NOTES

TIME: The syllabus is laid out for a co-op that meets 28 times (most common) during the year. You can adjust the lessons accordingly to shorten or length that time. One easy way to gain more time is to get the curriculum to the students a couple of weeks before your first meeting and assign the students week one or one and two (from the syllabus) before the first meeting.

PROJECTS: At the beginning of most sections, the student will build a project (car, circuit, etc.). They will use the project during that section's experiments and activities. Because of this, the student should take their time building the project well. The directions on the CD are very clear. Students should be encouraged to take their time and follow all of the directions. You can either have the students build the projects at home, or in class. We have laid out this syllabus having students complete the projects at home, the experiments and activities in class. If you choose to build the projects in class, just allow enough class time and adjust the syllabus accordingly. Some thoughts on this:

1. Students build their projects at home.

Advantage: they can take their time building it making sure they do a good job.

Disadvantage: no direct teacher oversight – however the parent can oversee the building and the teacher can “fine tune” when the students bring the projects to class.

2. Students build their projects in class.

Advantage: oversight of teacher

Disadvantage: Can be challenging in class keeping all students focused and progressing at the same rate. May need longer class times on these “building” days.

CLASS SIZE/ORGANIZATION:

TIPS: We recommend the teacher go through the experiments on the CD before meeting. You don't need to actually do the experiments before-hand, but if you have “seen” how the experiment is conducted, it will help facilitate a smooth experimentation process with the class.

TIME: Depending on how long you meet, your class size, and class make-up you may need to adjust the syllabus accordingly. Some helpful ideas:

- Not enough time in class to complete all the experiments/activities
 - Just assign the unfinished experiments/activities for homework.
- Everything is finished and there is still class time left
 - Go over logbook questions verbally to reinforce concepts the students learned. Instead of asking them as multiple choice, just reword from “which of the following best describes ...” to “someone describe what ...”
 - Go over experiment results
 - If varying results, see if the students can determine why they are different
 - Ask how can the concept learned be applied in day to day life

RESEARCH: If as the instructor you have time, it is great to bring outside research/stories into class. This could also be an extra credit assignment for the students. Give them a topic and have them present their research findings to the class.

Syllabus for Exploration Education Science Curriculum

Week	Standard Course	Advanced Course
1	<p style="text-align: center;">CLASS INTRODUCTION</p> <ul style="list-style-type: none"> • Go over this syllabus, explain what the students are expected to bring to class (EE box, logbook filled out, project if needed). • Hand out curriculum boxes • Complete the lesson portion of chapter 1.1 together (have students answer questions in the logbook) and the activity worksheet on the Scientific method (but not building the racer). • Click through building the racer instructions to give students an idea of how the projects are built. Emphasize the following: <ul style="list-style-type: none"> ○ Follow directions ○ Take your time ○ Go through trouble-shooting section if necessary. 	<p style="text-align: center;">CLASS INTRODUCTION</p> <ul style="list-style-type: none"> • Go over this syllabus, explain what the students are expected to bring to class (EE box, logbook filled out, project if needed). • Hand out curriculum boxes • Complete the lesson portion of chapter 1.1 together (have students answer questions in the logbook) and the activity worksheet on the Scientific method (but not building the racer). • Click through building the racer instructions to give students an idea of how the projects are built. Emphasize the following: <ul style="list-style-type: none"> ○ Follow directions ○ Take your time ○ Go through trouble-shooting section if necessary. • Explain that chapter 1.4, 2.4, etc. are longer lessons, and chapter 1.5, 2.5, etc. are generally formal lab write-ups. • Also explain that the glider and mini-house will take extra time to build so they may want to plan some extra weekend time when they build those.
2	<p>Complete <u>before</u> class:</p> <ul style="list-style-type: none"> • Chapter 1.1 – Activity (lesson was done in class) • Chapter 1.2 – 1.3 lessons and activities (building the racer – bring to class) • Chapter 2.1 (lesson only) <p>Complete <u>in</u> class:</p> <ul style="list-style-type: none"> • Check student logbooks for completion of assignments • Spend time going over student’s racers making sure they are functioning properly (go through troubleshooting section in 1.3 activity if necessary) • Complete experiments/activities for chapter 2.1 	<p>Complete <u>before</u> class:</p> <ul style="list-style-type: none"> • Chapter 1.1 – Activity (lesson was done in class) • Chapter 1.2 – 1.3 lessons and activities (building the racer – bring to class) • Chapter 1.4 - lesson • Chapter 1.5 – Build the first part of the glider (leave at home) • Chapter 2.1 (lesson only) <p>Complete <u>in</u> class:</p> <ul style="list-style-type: none"> • Check student logbooks for completion of assignments • Spend time going over student’s racers making sure they are functioning properly (go through troubleshooting section in 1.3 activity if necessary) • Complete experiments/activities for chapter 2.1
3	<p>Complete <u>before</u> class:</p> <ul style="list-style-type: none"> • Chapter 2.2 – 3.3 lessons only <p>Complete <u>in</u> class:</p> <ul style="list-style-type: none"> • Check student logbooks for completion of assignments • Complete experiments/activities for lessons 2.2 – 3.3 	<p>Complete <u>before</u> class:</p> <ul style="list-style-type: none"> • Chapter 2.2 – 2.4, 3.1 – 3.4 lessons only • Chapter 2.5 – Finish building the glider <p>Complete <u>in</u> class:</p> <ul style="list-style-type: none"> • Check student logbooks for completion of assignments • Complete experiments/activities for lessons 2.2 – 3.3 • Complete lab write-up chapter 3.5 <p>During this experiment check student’s gliders. If available, take gliders to a large grassy area and “test them out”. Explain how to adjust wings, use a gentle toss. This may take some time.</p>
